DECEMBER 1948

LIST OF JOURNALS REGULARLY SEARCHED

The confidence with which an abstract journal is used is dependent upon many factors, of which the degree of completeness is not the least important. So that readers of PSYCHOLOGICAL ABSTRACTS may know the extent of our coverage we publish below the second annual list of journals which are regularly searched. This list includes 497 titles as contrasted with 433 in the list of Volume 21. There are also many changes from the first list in the status of individual journals, in assigned abstractors, or other details. This list is correct as of 1 November 1948. The searching categories are indicated by type face: **bold face**, journals received by the editorial office; roman, journals searched by the abstractor; *italics*, journals searched by title only. In those cases where no abstractor is indicated the journal is temporarily unassigned.

ABSTRACTORS

From its inception PSYCHOLOGICAL ABSTRACTS has been thought of as a cooperative venture to which members of the profession would contribute in the preparation of abstracts. Without the excellent assistance of over 200 individual psychologists it would be impossible to prepare the thousands of abstracts which are published each year. Although the number of contributions vary widely, equal thanks must be expressed to all. In the following list we again publish the names and addresses of contributors to the present volume. In addition we have indicated in parentheses following each name the number of abstracts that have been prepared by them and published in Volume 22.

ABSTRACTS OF HUMAN BIOLOGY

A sectional edition of *Biological Abstracts* designed particularly
for psychologists and related fields

Section H—Abstracts of Human Biology—includes Human Heredity; Population; Anatomy and Embryology; Child Development; Adolescence; Growth; Nutritional Disorders; Food Habits and Appetites, Malnutrition; Senescence; Endocrine Bases of Personality and Behavior; Reproduction and Sex; Human Ecology; Race; Health Factors Affecting Population and Human Adaptation; and kindred topics.

Section H does not compete with, or duplicate, any existing abstract services. Rather, it supplements these services by abstracting, from the biological point of view, the biological literature paralleling and directly applicable to that published in the psychological, neurological, sociological and anthropological journals.

Established in January, 1946, to meet the requirements in Psychology and related fields, Section H is priced at only \$6.50 (Foreign \$7.00). Write for full details and sample copy.
